

Leadership Training in Europe

From March 4–11, 9 students participated in the Leadership Training to visit France, Belgium and Denmark.

In France, the students conducted a site-visit to a rehabilitation facility of radioactive contamination of AREVA. In Belgium, they also visited European Union, the European Environmental Bureau, and a local NGO, and learned about their commitments and activities for environmental issues. Moreover, in Denmark, they visited the European Environment Agency and Danish Ministry of Environment to learn about environmental policies of European countries. In addition, they went out to the Samsø Island which is famous for renewable energy, and observed wind turbines and biomass facilities.

It was the first time for students to lead all the training from planning to implementation. Through this experience, students were able to not only widen the knowledge of environmental issues, but also improve the leadership skills.
